

# Dwarf Planets Song

There are five dwarf planets in our solar system  
And we revolve around the sun  
Four of us live in the Kuiper Belt  
As far as planets we're the smallest ones

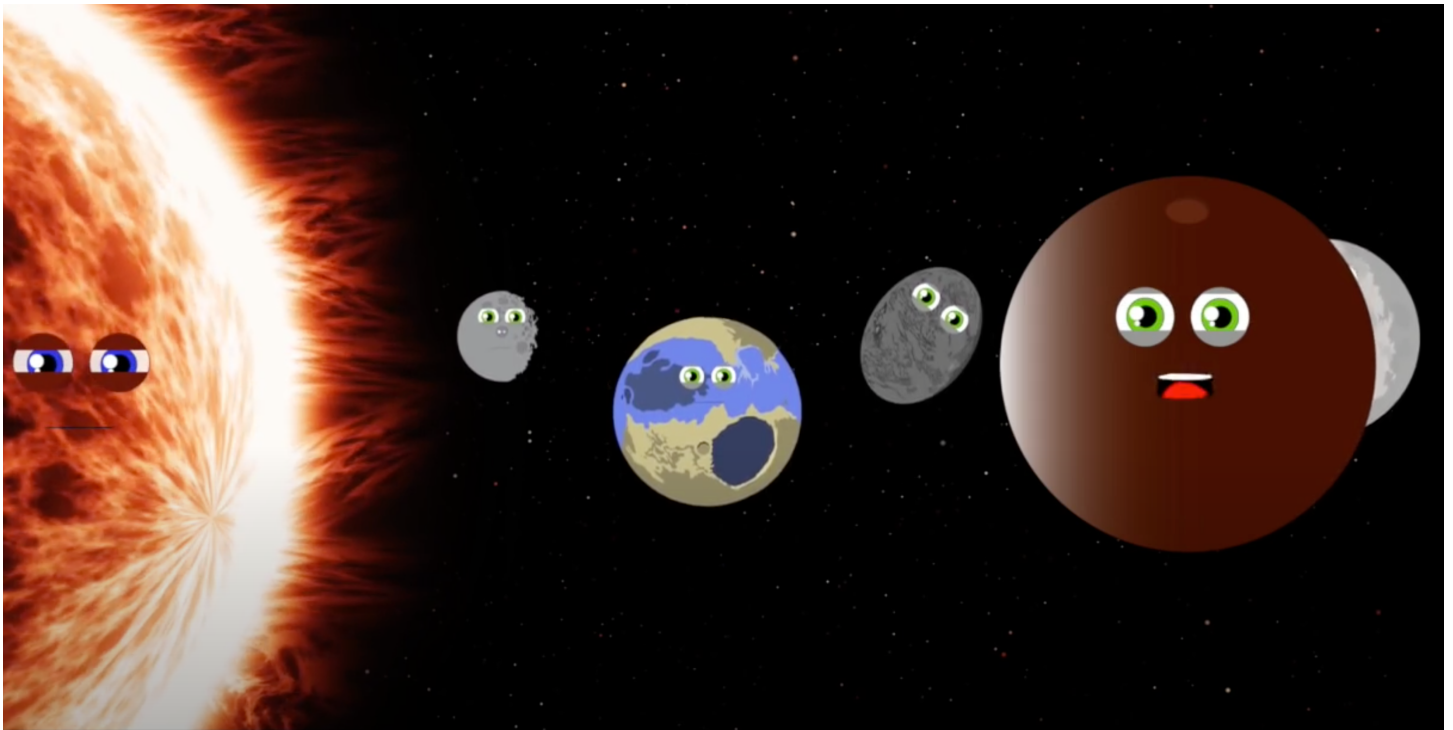

My name is **Ceres**  
And I'm a dwarf planet  
and the closest dwarf to the sun  
The mysterious white spots on my rocky surface  
And I am the smallest one

My name is **Pluto**  
I am a Dwarf planet  
And was the ninth planet from the sun  
I am one-third water in the form of ice  
And I have five moons that are lots of fun

My name is **Haumea**  
I am oval in shape  
do to the fast rotations that I make  
I take 285 years to orbit the sun  
Because I am so far away

There are five dwarf planets in our solar system  
And we revolve around the sun  
Four of us live in the Kuiper Belt  
As far as planets we're the smallest ones

I'm **Mah-kee mah-kee**  
I have no Atmosphere  
I was discovered in 2005  
I am one of the reasons Pluto lost his status  
So naturally, we do not jive

My name is **Eris**  
I'm more massive than Pluto  
I am big but I'm lots of fun  
557 is the number of years  
It takes me to revolve around the sun

There are five dwarf planets in our solar system  
And we revolve around the sun  
Four of us live in the Kuiper Belt  
As far as planets we're the smallest ones
