

Photosynthesis

Photosynthesis, photosynthesis
Photosynthesis, (photosynthesis)

Plants don't have a mouth
Like you and me (no, no no)
But they have to eat (yum!)
So they spread their leaves so green
To capture sunlight's energy

Plants don't have a nose
Like you and me (no, no no)
But they have to breathe
Did you know their leaves so green
Can take in air and make it clean?
(That's amazing, that's cool!)
That's photosynthesis, photosynthesis
Photosynthesis, (photosynthesis)

Plants can't hold a cup
Like you and me (no, no, no)
But they have to drink (ah!)
So they push their roots deep down
To soak up water from the ground

Plants don't wear green hats
Or shirts, or jeans
So why are they green?
(why, why, why, why)

It's because all plants are filled
(With what?)
With green stuff we call chlorophyll
Chlorophyll?

Chlorophyll is the green pigment, or color, found in plants. It helps them trap light. And without it, there'd be no...

Photosynthesis, photosynthesis
Photosynthesis, (photosynthesis)
Plants can make their very own food
With sunlight, water and air (so good)
That's because all plants are filled
With green stuff we call chlorophyll
That's Photosynthesis, photosynthesis
Photosynthesis, (photosynthesis)
That's Photosynthesis, photosynthesis
Photosynthesis, (photosynthesis) (yeah!)
