

# The Planets of our Solar System Song

We all come from a place  
The entire human race  
Depends upon our planet  
Racing through outer space  
And there are eight planets  
That orbit around the sun  
Come on, we'll introduce you  
And name them one by one:

Mercury, Venus, Earth and Mars  
Jupiter, Saturn  
Uranus, Neptune

I'm **Mercury**, the smallest planet, you see  
You humans could never live on me  
My atmosphere's too thin, and I orbit too fast  
My days are long - About 60 earth days as a matter of fact

I am **Venus**, my atmosphere's super hot  
I spin backwards in a way the earth does not  
I'm closest to the earth in distance and size  
I have no moons, I hope you can sympathize

I'm **Earth**, the planet that you're on, ya know  
I'm terrestrial, but covered in H<sub>2</sub>O  
I collide with things that I can't avoid  
But my atmosphere protects me from meteoroids

I'm **Mars** and you can jump higher on me,  
Because I have a third of earth's gravity  
I hear you plan to visit soon  
I'll be your first destination since the moon

I'm **Jupiter**, with my 79 moon crew  
Like Io and S/2003... J 2!  
Yea, you could say I have a pretty large girth  
Here's a storm twice the size of yo momma, Earth... Ohhh!

My name's **Saturn**, check out my pretty rings  
These rings are a few of my favorite things  
I'm a giant made of hydrogen and helium  
And please, stop hitting me with things

My name's **Uranus**, and I'm an ice giant... That's dope!  
I was the first planet found with a telescope  
I rotate backwards, and on my side  
I smell like rotten eggs,  
But that's just the hydrogen sulfide

I'm **Neptune**, I'm the windiest planet around  
I've got supersonic winds  
That's faster than sound  
An ice giant with 13 moons  
And a dark vortex that may go away soon

I'm **Pluto**, and I will not be forgotten!

Pluto, Pluto, Pluto, Pluto... beautiful, but, um... yea, we've been over this, and... you're considered a dwarf planet these days, sooo...

Gurl, I'm the biggest object in the Kuiper Belt.

Mercury, Venus, Earth and Mars

Jupiter, Saturn

Uranus, Neptune

And, I guess, not Pluto
