

Heat turns water into vapor:

A gas that rises through the air

And cold makes vapor condense to liquid and fall back down everywhere

We are water molecules

And we're on an epic journey all around

It's called the water cycle from the sea to the air to the ground

EVAPORATION: Water turns to vapor

CONDENSATION: Vapor turns to drops

PRECIPITATION: Drops fall down

And they **COLLECT** all over the ground

And we can fall as many things, like rain or sleet, snow

And we collect almost anywhere, wherever water freezes or flows

You can call it the hydrologic cycle too

And they even cycle in and out of animals, plants, and you!

Eww!

Heat turns water into vapor:

A gas that rises through the air

And cold makes vapor condense to liquid and fall back down everywhere

EVAPORATION: Water turns to vapor

CONDENSATION: Vapor turns to drops

PRECIPITATION: Drops fall down

And they **COLLECT** all over the ground
